DETAILED ACTION

Response to Arguments

Applicant's arguments, filed 11/14/08, have been fully considered and are persuasive. The previous rejection has been withdrawn.

Allowable Subject Matter

Claims 1, 3-22 and 24 are allowed. The following is an examiner's statement of reasons for allowance:

With respect to claims 1, 15, 18 and 22 AAPA teaches a power supply with multiple outputs (Fig. 1), comprising: a front-end converter (item 1) with a current mode output; a first buck converter (items 2) and a second buck converter (items 3), both of which cascade from a first output capacitor (item Cf) of the front-end converter (item 1). AAPA does not teach a time delay synchronous control circuit, for controlling a delay time between the time the front-end converter begins to have a pulse current to the first output capacitor and the time the first buck converter and the second buck converter being turned on is adjusted. Bourdillon teaches a controller (connection of fast loop controller and slow loop controller 320) for controlling a delay time (T1-T6) between the time the front-end converter begins to have a pulse (from T2 to T6 discharging time) and the time the first buck converter and the second buck converter being turned on

(discharge time) is adjusted. The cited prior art does not teach time the first buck converter and the second buck converter being turned on is adjusted so as to reduce the ripple current on the first output capacitor. At least this further limitation is not taught or rendered obvious by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
